## 2 LLAlignEnd

The following ends with a line break.

$$f(x) = ax^2 + bx + c \quad (1)$$

$$g(x) = dx^2 + ex + f \quad (2)$$

(3)

The following does not end with a line break.

$$f(x) = ax^2 + bx + c \quad (4)$$

$$g(x) = dx^2 + ex + f \quad (5)$$

Here is the next line after the align environment.

### 3 LLAlignSingleLine

## 6 LLBracketCurly

We cannot fully determine whether the use of curly brackets is wrong or not. It is not detected if some spaces are inserted between the command name and the curly brackets.  
 $\min(a,b)$  and  $\min a, b$  are also checked.

In the pseudocode, `cleveref` can fail to appropriately reference lines. Thus, we don't detect `\ref{line:1}` like this: Line 1. We detect other formats `\ref{myline:2}` like this: Line 2. You can change these behaviors via settings.

## 12 LL`DoubleQuotes`

Use "XXX" instead of "XXX" or "XXX". You can use them for `H\"older` and `\verb`.

- Karush-Kuhn-Tucker (optimization, Karush–Kuhn–Tucker)

Exceptions: Non-Negative, Well-Known, etc.

## 14 LLEqnarray

We should not use eqnarray. It has some spacing issues.

## 25 LLSpaceEnglish

Space between text and inline math like  $x = 1$  and  $y = 2$  lacks a space. No spaces before commas, such as  $z = 3$ , we do not detect them.
